

ALI AKBAR SUBHANI

Data Analyst | Full-Stack Developer (MERN & Python)

alixakbrr231@gmail.com | +92 317 4474974 | Lahore, Pakistan | [GitHub](#) | [LinkedIn](#)

ABOUT ME

Data-focused developer with hands-on experience transforming raw datasets into actionable business insights through analytics dashboards, forecasting, and reports. Skilled in Python (Pandas, NumPy, Scikit-learn), SQL, Excel, and Power BI, with a strong foundation in full-stack development using MERN, Django, Flask, and FastAPI. Holds IBM's Data Analyst Professional Certificate, with a focus on SQL, data visualization, and real-world business analysis.

TECHNICAL SKILLS

Data Analysis: Python, Pandas, NumPy, SQL, Power BI, Cognos, Data Visualization, Statistical Analysis, Forecasting

Spreadsheets & Reporting: Microsoft Excel, Microsoft Office, Dashboard & Report Design

Databases: MongoDB, Mongoose, MySQL, PostgreSQL, Database Design & Management

Development: Python, Django, Flask, FastAPI, JavaScript, React.js, Node.js, Express.js, HTML, CSS

Tools: Git, GitHub, Postman, VPS Deployment

Core Strengths: Data Analysis, Data-Driven Decision-Making, Predictive Analytics, Machine Learning

PROFESSIONAL EXPERIENCE

Python Trainee — Excellence Delivered (ExD)

09/2025 – 03/2026

- Analyzed large datasets using Pandas and NumPy, performing data cleaning, EDA, forecasting, and variance analysis to identify trends and business insights.
- Used Power BI and Excel for data visualization and dashboard development, including product demand forecasting and predictive model training.

Freelance Full-Stack Developer — Self-Employed

01/2025 – Present

- Built and deployed a MERN e-commerce application with a custom admin dashboard for real-time inventory.
- Implemented CRUD functionality for six core modules: products, categories, stock, site content, messages, and product reviews.
- Analyzed sales, stock, and customer activity data within the admin dashboard to surface trends and support inventory decisions.
- Built reporting views into the dashboard to track key metrics for stakeholder visibility.

PROJECTS

E-Commerce Customer Behavior Analysis System

01/2026 – 02/2026 | Lahore, Pakistan

- Built a full-stack analytics application using FastAPI and React.js to analyze transactional customer data.
- Analyzed 250k records using Pandas, NumPy, and scikit-learn, performing preprocessing and feature engineering to deliver customer segmentation, churn prediction, CLV estimation, and demand forecasting.
- Applied clustering (K-Means) for customer segmentation and classification models for churn prediction, validating results with standard statistical metrics.
- Conducted cohort and trend analysis on purchasing behavior to surface actionable insights, visualized through interactive charts for business decision-making.

AI-Powered Data Analytics Dashboard

08/2026 – 08/2026 | Lahore, Pakistan

- Built an AI-powered analytics platform that ingests any CSV dataset — tested with files up to 1 million rows — automatically profiling record counts, duplicate entries, and missing values, and giving users manual control over data cleaning before analysis.
- Automated exploratory data analysis (EDA) and visualization using Pandas and NumPy, with Power BI powering an interactive dashboard for tracking key metrics and trends.
- Integrated an LLM-powered chat-with-data feature, enabling natural language queries for AI-driven insight generation and faster exploratory analysis.

Repository: <https://github.com/AliAkbar-code/AI-Powered-Data-Analytics> (live demo not yet available)

EDUCATION

Bachelor of Science in Information Technology (BSIT)

12/2020 – 12/2024

Civil Lines College, Punjab University, Lahore, Pakistan

CERTIFICATION

IBM Data Analyst Professional Certificate

07/2026 – 09/2026

Coursera

- Completed IBM's Data Analyst Professional Certificate, gaining hands-on experience in Python, SQL, Excel, and Data Visualization.
